Art Unit: 2141

1. Claims 1-31 are presented for examination.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. § 102

Page 2

that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

or

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

3. Claims 1-5, 7-15, 17-25, and 27-31 are rejected under 35 U.S.C. § 102(e) as being anticipated by Pettey Pub. No. 2003/0014544.

4. As to claim 1, Pettey teaches the invention as claimed, including a method for posting buffers for a non-posting TCP application, the method comprising:

posting at least one generic buffer located in a memory external to a host adapter (Fig 5; page 10, paragraphs [0088 – 0089]); and

transferring incoming data for a TCP connection to said at least one posted generic buffer prior to the non-posting TCP application posting a TCP application posted buffer for said incoming data (page 10, paragraphs [0090 – 0091]).

- 5. As to claims 2-3, Pettey teaches allocating at least one generic buffer from a pool of available generic buffers upon receipt of said incoming data for said TCP connection; storing at least a portion of said incoming data in said allocated at least one generic buffer if said TCP application posted buffer is unable to accommodate said incoming data (page 10, paragraph [0090]).
- 6. As to claims 4-5, Pettey determining whether said incoming data for said TCP connection transferred to said at least one posted generic buffer is in sequence; assembling said incoming data in said at least one posted generic buffer if said incoming data is out of sequence (page 7, paragraphs [0066 0067]).
- 7. As to claims 7-8, Pettey teaches polling said at least one posted generic buffer by the non-posting TCP application to determine when said at least one posted generic buffer contains data for said TCP connection; in response to said polling, notifying the

Art Unit: 2141

non-posting TCP application when said incoming data is stored in said at least one posted generic buffer (pages 10-11, paragraphs [0092 – 0093]).

- 8. As to claims 9-10, Pettey teaches posting at least one generic buffer prior to said transferring of said incoming data for a TCP connection to at least a portion of available TCP application buffers; posting at least one posted generic buffer located in a memory internal to said host adapter (page 10, paragraph [0090 0092]).
- 9. Claims 11-15, 17-25, 27-31 have similar limitations as claims 1-5 and 7-10; therefore, they are rejected under the same rationale.
- 10. Claims 6, 16, and 26 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 11. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Le H. Luu whose telephone number is 571-272-3884. The examiner can normally be reached on 7:00am 4:30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Rupal Dharia can be reached on 571-272-3880. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR.

Art Unit: 2141

Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
